

If you needed targeted bird deterrents & netting here tomorrow

you'd call: 0203 859 9588

At Fortis Property Services, we install bird deterrent and proofing systems to stop pigeons, gulls and pest birds from nesting, roosting and fouling your buildings. Balconies, open voids, solar panels, ledges, plant areas and rooflines, we survey the problem and install the right solution: netting, spikes, wire systems and tailored proofing. All systems are professionally installed to remain discreet, durable and fully compliant, protecting both the fabric of the building and the surrounding environment.

This is about protecting assets and reducing repeat cost. Guano fouling damages finishes, blocks gutters, creates slip hazards and drives ongoing complaints. Proper deterrence prevents nesting before it becomes a cycle of cleaning and repeat contamination. Works are planned carefully, including access and working at height controls, so installations are safe, lawful and effective. Simply **contact us** today to request a survey and quotation.

Bird Deterrents, Netting & Proofing

Technical overview

Installed deterrent systems to prevent roosting, nesting and guano fouling.

Systems we install

- Bird netting for balconies, voids, plant areas
- Spikes and ledge deterrents
- Tensioned wire systems
- Solar panel proofing solutions
- Gap sealing and exclusion proofing

What you get

- Reduced cleaning and maintenance cycles
- Protection of finishes, gutters, plant and solar equipment
- Lower slip risk from fouling
- Fewer resident complaints

How it's managed

1. Survey of activity and nesting behaviour
2. Method and fixings design
3. Installation with safe access planning
4. Handover and maintenance advice
5. Optional follow-up inspection

H&S controls

- Work at height controls and safe access selection
- PPE and contamination controls where fouling exists
- Safe waste handling for guano debris (if included)
